

Fish Pen (Penicillin 250mg)

Fish Pen (Penicillin) exerts a bactericidal action on gram-positive and some gram-negative bacteria. Penicillin is a broad spectrum antibiotic. It is effective against a number of pathogenic bacteria associated with ornamental fish diseases. Can use for pop-eyes, infected eyes, fin or tail rot, gill disease, columnaris disease, and skin ulcerations.

Dosage & Administration

Add one tablet (250 mg) into aquarium for each 10 gallons of water to be treated. Repeat in 24 hours. It is suggested that a partial water change be made between treatments. While duration of treatment depends on type and severity of the infection, it is recommended that extended baths in the medication continue for a minimum of 5 days & for not more than 10 days. Discontinue treatment with this medication if no improvement is noted within 5 days.

Dogs and Cats: 10 mg/Kg (5 mg/lb) every 8 hours orally. Fish Pen is commonly given in off-label use to small animals. Use with caution in animals allergic to penicillin-like drugs.

- Effective against susceptible gram-positive bacteria and anaerobes.

Caution

Keep out of reach of children. For aquarium use only. Intended for ornamental fish and/or ornamental organisms, and not intended for use with fish for human consumption. For those allergic to penicillin, do not put hand in tank for three days after treatment.

Ingredients

250 mg Penicillin

Storage

Store at controlled room temperature of 59°-86°F. (15°-30°C).
